- A. Types
- B. Message
- C. PortType
- D. Namespace

Answer: D

Question: 4

All of the following are faultcode values defined in the SOAP 1.1 specification EXCEPT:

- A. VersionMismatch
- B. MustUnderstand
- C. Client
- D. Network

Answer: D

Question: 5

A Web banking application assigns a unique transaction number to every online banking operation. A servlet acquires the transaction number with the following line of code:

```
Long transactionId = transactionIdGenerator.getNext TransactionId();
```

Upon completion of the banking operation, the servlet forwards the request to a JSP that displays the transaction number in the confirmation response. What is the BEST way for the servlet to ensure that every banking operation has a unique transaction number?

- A. Use transactionId only as local variable in methods of the servlet class and store it in the HttpSession object.
- B. Ensure only one transaction ID is ever stored in the HTTP session and exists only while the request is being processed.
- C. Declare the servlet to implement Single ThreadModel and store transactionId in the HttpSession object.
- D. Declare transactionId as an instance variable of the servlet class and store it in the HttpSession object.

Answer: B
