Exam 70-282: Designing, Deploying, and Managing a Network Solution for a Small- and Medium-Sized Business

Question:1

You work as a network administrator at Cer-tech.com. The Cer-tech.com network consists of a single Active Directory domain named Cer-tech.com. The CEO of Cer-tech.com makes use of a broadband connection to connect to the Internet from the head office. The Cer-tech.com network contains 15 user workstations that are configured to run Microsoft Windows 95 in a peer-to-peer network. Client01 is a workstation on the Cer-tech.com network. Client01 functions as the file server. The users make use of floppy disks to share information. They do not have access to the Internet. You have received instruction from the Manager to modify the network environment to meet the subsequent requirements: Users are able to share information without making use of floppy disks, Users are able to access the Internet through a single connection, Centralized user administration, A dedicated e-mail server and The ability to encrypt files on user workstations. You thus need to identify solutions that will meet these requirements while reducing the costs. What solutions can you recommend? (Choose all that apply)

- A. Upgrade the user workstations to Windows XP Professional and to make use of the existing broadband connection.
- B. Recommend that Cer-tech.com buy a leased broadband connection to the Internet.
- C. On the company network the server that is configured to run Microsoft Windows Small Business Server 2003 Standard Edition should be installed.
- D. The user workstations should all be upgraded to the latest Windows 95 service pack.

Answer: A, D

Question:2

You are employed as the network consultant at Cer-tech.com. The Cer-tech.com network consists of a single Active Directory domain named Cer-tech.com. The majority of the staff at Cer-tech.com works normal business hours from the Monday to Friday, 8:30 A.M. to 5:30 P.M. You have received instruction from the Manager to set up a backup schedule for a workstation that is configured to run Microsoft Windows Server 2003. This schedule should provide adequate time between 11:00 P.M. and 6:00 A.M. in order to back up the files. There is sufficient storage capacity to hold the backup. You thus need to propose a backup plan that will permit a restore in the least amount of steps. What should you do?

- A. Propose that a normal backup be used to backup tapes on Monday and incremental backups to backup tapes on Tuesday to Friday.
- B. Propose that a copy backup to the server hard disk on Monday and normal backups to the server hard disk can be run on Tuesday through to Friday.
- C. Propose that an incremental backup to the server hard disk be used on Monday and differential backups to the server hard drive should be used on Tuesday to Friday.
- D. Propose that the plan should recommend for a normal backup to backup the tapes on Monday. The differential backups will then be needed to backup tapes on Tuesday through to Friday.

Answer: D

Question:3

You work as the network administrator at Cer-tech.com. The Cer-tech.com network consists of a single Active Directory domain named Cer-tech.com. The Cer-tech.com network contains three Microsoft Windows 2000 Professional computers and 15 Microsoft Windows XP Professional mobile computers. The Cer-tech.com network has one Microsoft Windows Small Business Server 2003 computer named Server01. Server01 hosts e-mail messaging and file sharing. You have been informed by the Manager that management wants to increase productivity as well as communication between its staff members. The staff of Cer-tech.com requires the ability to share documents, schedule meetings and set up surveys. You thus need to set up the network to meet the needs of the company. What should you do?

- A. Add a calendar Web Part to the SharePoint site to meet the needs of the company.
- B. In Server Management console permit the Allow logon to Terminal Server property in the User Properties.
- C. Add users to the Mobile User Template. Then install Connection Manager from the Remote Web Workspace site.
- D. Add a new member server that is configured to run Microsoft Exchange 2000 Server to meet the needs of the company.

Answer: A

Question:4

You work as the network administrator at Cer-tech.com. The Cer-tech.com network consists of a single Active Directory domain named Cer-tech.com. Your duties at Cer-tech.com include the installation and configuration of Windows Small Business Server 2003. At present the Cer-tech.com network contains the following computers:

1 Windows Small Business Server 2003 domain controller
2 Windows Server 2003 workstations
30 Windows XP Professional client workstations.

One of the Windows Server 2003 workstations named Server01 is configured as a DHCP server and the 30 Windows XP Professional workstations are all configured as DHCP clients. A singular scope is identified on Server01 containing 60 IP

addresses, 172.17.55.11 through 172.17.55.70. You add 20 Windows XP Professional workstations to the domain and configure them as DHCP clients. You received a couple of complaints from the Cer-tech.com users stating that they are unable to log on to the network. To this end you investigate and find that a DHCP Jet database error was generated in the Event Log on Server01. Thus the users experiencing the problems are due to the fact that there were no IP addresses delivered to their particular workstations. You receive instruction from the Manager to make sure that the DHCP server is operational by allowing the DHCP server to assign TCP/IP configuration information. What should you do?

- A. You should deactivate and reactivate the DHCP scope on Server01.
- B. You should reconcile the DHCP database.
- C. Make repairs to the DHCP database using jetpack.exe.
- D. Ensure that the DHCP server is authorized in Active Directory.

Answer: C

Question:5

You are the network administrator of an Active Directory domain that runs Microsoft Windows Server 2003, Standard Edition. You are responsible for managing and maintaining all DHCP servers in the organization. You need to create a test lab that represents the current production environment. The lab network needs to be completely isolated from the rest of the production network. You need to recreate the current production DHCP server configuration in the test lab as quickly as possible. What should you do?

- A. DHCP database and then restore it to the DHCP server in the test lab.
- B. Back up the current DHCP database and then reconcile it on the DHCP server in the test lab.
- C. Reconcile the current DHCP database and then copy the log file to the DHCP server in the test lab.
- D. Back up the current DHCP log file and then copy it to the DHCP server in the test lab.

Answer: A Question:6

You work as the network administrator at Cer-tech.com. At present the Cer-tech.com network makes use of a Lotus Domino system for e-mail and messaging purposes. The management of Cer-tech.com decides to implement a Windows Small Business Server 2003 network with Active Directory and Exchange Server 2003 messaging system. A new Cer-tech.com management directive states that the Cer-tech.com network is to be upgraded to a Windows Small Business Server 2003 network in an Active Directory domain and using Exchange Server 2003 as the new messaging system. You received instructions from the Manager to implement the new management directive. In the upgrade you must minimize the impact on business operations that might result from the migration from Lotus Domino to Exchange Server 2003. You then decide to implement an incremental migration strategy where migration will take place in a step by step process and the users that are not migrated with the initial migration to the new messaging system continues to make use of the existing Lotus Domino system. You also need to make sure that both messaging systems function properly and that there is the successful exchange of e-mail between the users of both Lotus Domino and Exchange Server 2003 systems. What should you do?

- A. Make use of Routing Group connector to ensure the required functionality.
- B. Create a group policy for Lotus Domino users to ensure the required functionality.
- C. Create a new recipient policy for the Lotus Domino users to ensure the required functionality.
- D. Make use of Exchange Server 2003 Connector for Lotus Notes/Domino to ensure the required functionality.

Answer: D

Question:7

You are employed as the network administrator at Cer-tech.com. The Cer-tech.com network consists of a single Active Directory domain named Cer-tech.com. Cer-tech.com has headquarters in London and branch offices in Paris, Berlin and Athens. The headquarters of Cer-tech.com in London consists of 40 staff members. Each branch office has 5 staff members. You provide every branch office with Internet access. This is done through a Digital Subscriber Lines (DSL) line. You purchase a new server for Cer-tech.com. You now need to provide all the users with Web access to a central file storage location at the headquarters as well as to e-mail functions that are hosted locally on the new server. What should you do?

- A. You need to install Microsoft Windows Server 2003, Standard Edition with IIS only.
- B. Microsoft Windows Small Business Server 2003 should be installed. Thereafter you can direct all users to the SharePoint site.
- C. To accomplish this you need to install Microsoft Windows Server 2003, Standard Edition and Microsoft SharePoint Team Services only. Then you can direct all users to the SharePoint site.
- D. You need to install Microsoft Windows Server 2003, Standard Edition.

Answer: B

Question:8

You work as the network administrator at Cer-tech.com. The Cer-tech.com network consists of a Windows Small

Business Server 2003 workstation and 25 Windows XP Professional workstations. A shared folder is created on the Windows Small Business Server 2003 workstation. The users of Cer-tech.com store their shared documents in the shared folder that was created. You have received instruction from the Manager to ensure the ability to recover files stored in this folder in the shortest possible time in the event of corruption or deletion of files. What should you do? (Choose all that apply)

- A. You should configure folder redirection using a login script.
- B. You should configure folder redirection using a Group Policy object (GPO)
- C. You should enable Shadow Copied on the shared folder volume.
- D. You should reschedule a daily backup of the shared folder.

Answer: B, C

Question:9

You work as the network administrator at Cer-tech.com. The Cer-tech.com network consists of a single Active Directory domain named Cer-tech.com. The Cer-tech.com network has one server named Server01. Server01 is configured to run Microsoft Small Business Server 2003. It has come to your attention that the users of Cer-tech.com make use of an unauthorized application that compromises the network security. This is unacceptable and the Manager wants you to address the situation. You thus need to implement a security policy that will prevent users from accessing the unauthorized application. You must accomplish this task with the least amount of administrative effort. What should you do?

- A. Create a new Software Restriction Policy based in the hash rule.
- B. A new Software Restriction Policy based in the path rule should be created to prevent the users from accessing the unauthorized application.
- C. Set the default software restriction security level to Disallowed. Thereafter create a new Software Restriction Policy that will enable the application to run in the hash rule.
- D. The default software restriction security level needs to be set to Disallowed. Thereafter create a new Software Restriction Policy that enables the application to run in the path rule.

Answer: C

Question:10

You are the network administrator for an advertising agency. The agency has a server that runs Microsoft Windows Server 2003. The agency connects to the Internet with a broadband router. The agency has 10 employees. Each employee has a mobile computer. Agency policy mandates that all employees connect to the server through a PPTP connection to send and receive e-mail messages and share files. The agency hires an additional 15 employees. Employees now report trouble connecting to the server at random times throughout the day. You need to ensure that all employees can connect to the server at all times. What should you do?

- A. Direct port 3389 on the agency's broadband router to point to the server.
- B. Increase the number of PPTP ports in Remote Access Service (RAS).
- C. Decrease the number of L2TP ports in Remote Access Service (RAS).
- D. Direct ports 25 and 110 on the agency's broadband router to point to the server.

Answer: B

Question:11

You work as the network administrator at Cer-tech.com. The Cer-tech.com network consists of a single Active Directory domain named Cer-tech.com. Cer-tech.com has its headquarters in Chicago and a branch office in Dallas. There are currently 30 staff at headquarters and 10 staff members in the Dallas office. There can be as many as five remote project sites at any given time. All remote project sites have a temporary office with two computers. An e-mail system that is hosted at its ISP is used by Certech.com. Communication between staff as well as the clients is conducted by e-mail. The project sites make use of dial-up connections over dedicated telephone lines for Internet access. All the project sites make use of Microsoft Windows Server 2003 Terminal Server for accessing the headquarters. Cer-tech.com has a dedicated Internet Security and Acceleration (ISA) Server 2000 computer for security and for Internet restrictions and monitoring. There is dedicated server that runs Windows Server 2003 Terminal Server for the remote sites. Cer-tech.com has a dedicated backup server. There is a backup of as much as 50 GB of information every evening. You have been informed by the Manager that Cer-tech.com requires a file and print server that is able to run line-of-business (LOB) applications. You need to recommend a server solution that will improve network efficiency as well as making network administration easier. What information do you require prior to recommending a solution? (Choose all that apply)

- A. You need to determine whether the servers are owned or leased.
- B. You need to determine if the LOB application that are in use.
- C. You need to establish if Cer-tech.com will consider server consolidation.
- D. You need to determine which telephony company is used for dial-up lines at the project sites.

Answer: A, C

Question:12

You are employed as the network administrator at Cer-tech.com. The Cer-tech.com network consists of a single Active Directory domain named Cer-tech.com. The Cer-tech.com network consists of one Microsoft Windows Server 2003 computer and 25 Microsoft Windows XP Professional client computers. Staff consistently overwrites images from other staff members in the branch. Your assistance is therefore constantly needed to restore files from backup tapes. You need to permit staff the ability to restore files that is up to 24 hours old. What should you do?

- A. To achieve this you need to select Volume in the Shadow Copies tab in volume Properties. Then Click Enable.
- B. You should select Volume in the Shadow Copies tab in Volume Properties. Then click on Create Now.
- C. You should select Volume in the Shadow Copies tab in Volume Properties. Then select Adjust Maximum Size in the Settings property.
- D. To achieve this you should select Volume in the Shadow Copies tab in Volume Properties. Then click Create Now and select the Settings button. Then select Schedule and select Every Monday.

Answer: A

Question:13

You work as the network administrator at Cer-tech.com. The Cer-tech.com network consists of a single Active Directory domain named Cer-tech.com. You have received instruction from the Manager to install Microsoft Windows Small Business Server 2003 on a network computer. The Cer-tech.com network consists of a server, 30 client computers and 10 mobile computers. The manager of the Sales department wants his staff to have a printing device near the department's location. He also requests that they have exclusive use of this device. You thus need to install a remote network printing device close to the users of the ales department. To this end you create a Sales group and add these users to the ales group. You then configure the print device to meet the needs of the users with he default groups and the assigned permissions. What should you do?

- A. You should change the permission from the Everyone group to Manage Documents only. Then grant Print permissions to the Administrator group.
- B. You should deny permissions to the Everyone group hen grant Print permissions to the Creator Owner group.
- C. You should deny permissions to the Everyone group. hen grant Print permissions to the Sales group.
- D. You need to remove all existing groups. then add the Sales group access to the print device.

Answer: D

Question:14

You work as the network administrator at Cer-tech.com. The Cer-tech.com network consists of a single Active Directory domain named Cer-tech.com. Cer-tech.com specializes in Adult Literacy. The Adult Basic Education and Training (ABET) centre consists of three classrooms and 30 user workstations that is configured to run Microsoft Windows XP Professional. A Cer-tech.com written security policy states that all computers on the Cer-tech.com network are to be protected against threats and vulnerabilities. You have received instruction from the Manager to manually install software updates on every user workstation. You have received instruction from the Manager ensure that the network adheres to the written security policy. To this end you then install a Microsoft Windows Small Business Server 2003 workstation. Now you need to automate the process of deploying software updates to the user workstations. What should you do? (Choose all that apply)

- A. Install Software Update Service (SUS) on the Windows Small Business Server 2003 computer to automate the process of deploying software updates to the user workstations.
- B. In order to automate the process of deploying software updates to the user workstations you should configure Automatic Updates option on every user workstation to search for updates on a scheduled basis from Microsoft Windows Update servers.
- C. Create computer account by using the Client Computers node in Server Management Console in order to automate the process of deploying software updates to the user workstations.
- D. In order to automate the process of deploying software updates to the user workstations you should create a Group policy object. Then enable Configuration Automatic Updates Properties in Windows Update in Group Policy Object Editor with appropriate update schedule. Then enable Specify intranet Microsoft update service location properties with appropriate server information.

Answer: A, D

Question:15

You are employed as the network consultant at Cer-tech.com. The Cer-tech.com network consists of a single Active Directory domain named Cer-tech.com. The company has a server with a full installation of Microsoft Windows Small Business Server 2003 which includes Microsoft Exchange. The CEO of Cer-tech.com spends 50% of his time out of the

office. He also makes use of a paging device with a non-corporate e-mail address. You have received instruction from the Manager to have all the e-mail messages of the CEO forwarded to the pager. A copy of these messages needs to be left on the server. The CEO requests that no one is allowed to send direct e-mail messages to the pager. You now need to configure a method to have the e-mail messages of the CEO sent to the pager. You must ensure that no one sends e-mail messages directly to the pager of the CEO. What should you do?

- A. You should configure the account of the CEO in Add Users and Computers in order to forward all e-mail messages to a pager contact. Then use Active Directory Users and Computers to hide the contact from Exchange mail lists.
- B. The CEO account should be configured to forward all e-mail messages to a pager contact created in Add Users and computers. He should then send an e-mail message to all corporate users that informs the users to avoid sending e-mail messages directly to the pager contact.
- C. You should configure the CEO's account to forward all e-mail messages to a pager contact created in Add Users and Computers. Then configure a group policy that will blocks e-mail messages to the pager contact.
- D. A pager contact needs to be created in System Manager that will forward all of the e-mail messages of the CEO to his pager.

Answer: A

Question:16

You work as the network administrator at Cer-tech.com. The Cer-tech.com network consists of a single Active Directory domain named Cer-tech.com. The Cer-tech.com network has one network server named Server05. Server05 is configured to run Microsoft Small Business Server 2003. Part of your duties at Cer-tech.com includes designing the backup strategy. You received instructions to perform a normal backup of data to tape every evening as part of a backup strategy. In your solution you need to ensure that the backups are performed successfully. What actions should you do? (Choose all that apply)

- A. The data in the production environment needs to be restored to make sure that a successful backup is performed.
- B. Review the backup logs stored on Server05.
- C. The data in the test environment needs to be restored and the integrity of the data on the backup tapes needs to be verified.
- D. Review the backup logs stored on the backup tape.

Answer: A, D

Question:17

You work as the network administrator at Cer-tech.com. The Cer-tech.com network consists of a single Active Directory domain named Cer-tech.com. As administrator you install Microsoft Windows Small Business Server 2003 on a network server. The Cer-tech.com consists of 25 client computers that are configured to run Microsoft Windows XP Professional. Management informs you to install the accounting application of Cer-tech.com that makes use of a Microsoft SQL 2000 Server on a member server. This Microsoft SQL 2000 Server is configured to run Microsoft Windows Server 2003. This accounting application runs constantly. You install a tape drive on the member server for system backups. You have received instruction from the Manager to create a backup plan that executes database backups as well as transaction log backups of the accounting application's databases. The Manager also informs you to create separate weekday and weekend schedules for all these backups. You thus need to devise a backup plan that requires the minimum of administrative effort. What should you do?

- A. Clive Wilson needs to create a database maintenance plan on the member server. The Database maintenance plan on the member server will then back up the databases and the logs as a single maintenance plan.
- B. To achieve this Clive Wilson needs to create a database maintenance plan on the Windows Small Business Server 2003 computer. The database maintenance plan will then back up the databases and the logs as a single maintenance plan.
- C. To accomplish this he needs to create a backup by using the Windows Small Business Server 2003 Backup wizard tool.
- D. A backup of the drive that contains the SQL databases needs to be created by Clive Wilson. Clive Wilson should create the drive by using the Backup wizard.

Answer: B

Question:18

You work as the network administrator at Cer-tech.com. The Cer-tech.com network consists of a single Active Directory domain named Cer-tech.com. The Cer-tech.com network contains a new server runs Microsoft Windows Small Business Server 2003. Cer-tech.com has a broadband router with a static IP address. Cer-tech.com registers the domain name southridgevideo.com. You have been informed by the Manager that management wishes to host its own e-mail messaging. For this purpose you configure Microsoft Exchange Server 2003. You install Microsoft office outlook 2003 is installed on all of the company workstation. You have received several reports from users stating that they are receiving

internal e-mail messages but are unable to receiving external e-mail messages. You need to ensure that the Cer-tech.com users are able to receive external e-mail messages. What should you do? (Choose all that apply)

- A. Configure Microsoft Outlook Express for all clients in order to receive external e-mail messages.
- B. To ensure that external e-mail messages are received you need to have the ISP create a mail exchange (MX) record for Cer-tech.com.
- C. To accomplish this you need to forward port 25 on the broadband router to the server.
- D. Port 110 on the broadband router needs to be forwarded to the server.

Answer: B, C

Question:19

You work as the network administrator at Cer-tech.com. The Cer-tech.com network consists of a single Active Directory domain named Cer-tech.com. Cer-tech.com has its headquarters in London and a branch office in Paris. You have received instruction from the Manager to install a new server at the Paris office. This new server will host the company web site as well as perform user authentication. In your solution you need to make sure that an operating system is installed on the new server. What should you do?

- A. Ensure that Microsoft Windows Small Business Server 2003 Premium Edition is installed on the new server.
- B. Ensure that Microsoft Windows Small Business Server 2003 Standard Edition is installed on the new server. Thereafter she can add the server to the domain as the domain controller.
- C. Install Microsoft Windows Server 2003 Web Edition on the new server.
- D. Ensure that Microsoft Windows Server 2003 Standard Edition is installed on the new server. Thereafter the server can be added to the domain as the domain controller.

Answer: D

Question:20

You work as the network administrator at Cer-tech.com. The Cer-tech.com network consists of a single Active Directory domain named Cer-tech.com. The company network consists of a server that runs Microsoft Windows Server 2003. This server is named Server05. You have received instruction from the Manager to create an organizational unit (OU) named Sales. This organizational unit will hold all objects associated with user accounts and computer accounts for the Sales department. A global group named Sales Admins group is created. The members of this group will administer these objects. You need to enable the users in the Sales Admins group to administer the Sales OU. To this end you need to assign the appropriate permissions to the Sales group.

What should you do? (Choose all that apply)

- A. Make use of the Delegation of Control wizard to assign permissions to the Sales Organizational Unit.
- B. Enable the option to view the Security tab under Advanced Features in the Active Directory Users and Computers snap-in. Then add the Sales Admins group to the Managed by tab of the Sales Organizational Unit.
- C. Log in to the network by using a user account that has Domain Administrator permissions for the domain in which Sales Organizational Unit is located.
- D. Enable the Users, Groups and Computers as Containers option in the view menu of the Active Directory Users and Computers snap-in. Then add the Sales Admins group to the Sales Organizational Unit container.

Answer: A

Question:21

You are the network administrator for your company. The network contains a server that runs Microsoft Windows Small Business Server 2003. You implement the following backup schedule:

Sunday: Full backup Monday: Differential backup Tuesday: Differential backup Wednesday: Incremental backup Thursday: Differential backup Friday: Differential backup

All backups occur at 01:00 every day. On Thursday at 19:00, all data on the server becomes corrupted.

- A. Restore from the Sunday backup
- B. Restore from the Wednesday backup
- C. Restore from the Thursday backup
- D. Restore from the Monday backup
- E. Restore from the Friday backup

Answer: A, B, C

Question:22

You work as the network administrator at Cer-tech.com. The Cer-tech.com network consists of a single Active Directory domain named Cer-tech.com. Cer-tech.com has a staff compliment of 10. The Cer-tech.com network consists of 10 desktop computers on a peer-to-peer LAN. The 10desktop computers are configured to run Microsoft Windows 98, Second Edition. The staff is able to connect to the Internet via an ISP-provided Digital Line (DSL) modem that runs

Network Address Translation (NAT). The staff of Cer-tech.com is concerned that other users can access their personal files, since physical access to the computers is not limited. You have received instruction from the Manager to implement a solution that will eliminate the single biggest security risk to the network. You thus need to implement a solution that will eliminate the single biggest security risk to the network. What should you do?

- A. A hardware-based firewall should be added to the LAN. Then permit Web traffic reporting.
- B. To accomplish this you need to add a Windows Small Business Server 2003, Premium Edition server to the network. Then allow Internet Security and Acceleration (ISA) Web traffic reporting.
- C. Upgrade the desktop computers to Windows XP Professional. Thereafter you will need passwords for user logons.
- D. A Windows Small Business Server 2003, Standards Edition server needs to be added to the network. Then enable Internet Connection Firewall.

Answer: C

Question:23

You work as the network administrator at Cer-tech.com. The Cer-tech.com network consists of a single Active Directory domain named Cer-tech.com. The Cer-tech.com network has one network server named Server02. The Server02 is configured to run Microsoft Windows Small Business Server 2003 Standard Edition. You have received instruction from the Manager to migrate the domain to Microsoft Windows Server 2003. You have to accomplish this by using the least amount of administrative effort. You need to ensure that your solution will keep the costs low. What should you do?

- A. Purchase a new server and a Transition Pack. Then migrate the Microsoft Windows Small Business Server 2003 environment to Microsoft Windows Server 2003 to the new server
- B. Purchase a Transition Pack. Then migrate the Microsoft Windows Small Business Server 2003 environment to Microsoft Windows Server 2003.
- C. Purchase a new server and copy of Microsoft Windows Server 2003. Microsoft Windows Small Business Server 2003 environment can then be migrated to Microsoft Windows Server 2003 to the new server by making use of the Active Directory Connector.
- D. A copy Microsoft Windows Server 2003 should be purchased. Then migrate the Microsoft Windows Small Business Server 2003 environment to Microsoft Windows Server 2003.

Answer: B

Question:24

You are appointed as the network administrator at Cer-tech.com. The Cer-tech.com network consists of a single Active Directory domain named Cer-tech.com. The Cer-tech.com network contains a network server named Server08. The Server08 is configured to run Microsoft Windows Small Business Server 2003. Server08 stores client data in the shared folder on the hard disk. The mobile clients access this data through the Virtual Private Network (VPN). Your duties at Cer-tech.com include the configuration of Windows Server 2003. To this end you need to create a baseline log to monitor network utilization of the VPN. What should you do?

- A. Make use of Remote Access Logging on Server08 to create a Periodic Statulog that will record data from the VPN adapter.
- B. Make use of the Performance console on Server08 to create a counter log that will monitor network utilization through the VPN adapter.
- C. Create a baseline log to monitor network utilization of the VPN by using the properties tab on Server08object in the Routing and Remote Access console. Then enable the Log All Events option.
- D. Create a baseline log to monitor network utilization by using the Performance console on Server08. Create a trace log that will monitor network utilization through the VPN adapter.

Answer: B

Question:25

You are a network consultant for a company. The network contains a server that runs Microsoft Windows Small Business Server 2003 Standard Edition. The company uses a Microsoft Access database. Users report that the response time of the database is slow. You also discover that data is not saved correctly to the database. You need to recommend a database solution that decreases query response time and ensures that data is saved correctly. What are two possible solutions to achieve these goals? (Each correct answer presents a complete solution. Choose two.)

- A. Upgrade the server to Microsoft Windows Server 2003.
- B. Purchase and install Microsoft SQL Server 2005 on a new server computer. Migrate the Access database to the SQL Server computer.
- C. Upgrade the server to Windows Small Business Server 2003 Premium Edition. Migrate the Access database to the SQL Server component of Windows Small Business Server 2003 Premium Edition.
- D. Increase the value of the MaxBufferSize variable in the Msaccess.ini file to allocate more memory to the Access database.

Answer: B, C

Question:26

You are employed as the network administrator at Cer-tech.com. The Cer-tech.com network consists of a single Active Directory domain named Cer-tech.com. Your duties include the administration of a server named Server01. Server01 is configured to run Microsoft Windows Small Business Server 2003. In order for Cer-tech.com to send and receive faxes the organization makes use of Small Business Server Faxing. You have received several complaints from the managers in the various departments stating that faxes are not being received. You try to send a fax to Cer-tech.com however, the call is not answered. You have received instruction from the Manager to allow the organization to receive faxes as soon as possible without disrupting the operations of Cer-tech.com. You need to address this problem. What should you do?

- A. In order for the organization to receive faxes you need to open Server Administrator. Thereafter you can restart the modem.
- B. Firstly you should open Services. Thereafter you should restart the shared fax service.
- C. Firstly you should connect to the fax line with a PPTP connection. Thereafter you can reset the modem.
- D. You need to restart Server01.

Answer: B

Question:27

You work as the network administrator at Cer-tech.com. The Cer-tech.com network consists of a single Active Directory domain named Cer-tech.com. Cer-tech.com specializes in Adult Literacy. The Adult Basic Education and Training (ABET) centre consists of three classrooms and 30 user workstations that is configured to run Microsoft Windows XP Professional. A Cer-tech.com written security policy states that all computers on the Cer-tech.com network are to be protected against threats and vulnerabilities. You have received instruction from the Manager to manually install software updates on every user workstation. You have received instruction from the Manager ensure that the network adheres to the written security policy. To this end you then install a Microsoft Windows Small Business Server 2003 workstation. Now you need to automate the process of deploying software updates to the user workstations. What should you do? (Choose all that apply)

- A. Install Software Update Service (SUS) on the Windows Small Business Server 2003 computer to automate the process of deploying software updates to the user workstations.
- B. In order to automate the process of deploying software updates to the user workstations you should configure Automatic Updates option on every user workstation to search for updates on a scheduled basis from Microsoft Windows Update servers.
- C. Create computer account by using the Client Computers node in Server Management Console in order to automate the process of deploying software updates to the user workstations.
- D. In order to automate the process of deploying software updates to the user workstations you should create a Group policy object. Then enable Configuration Automatic Updates Properties in Windows Update in Group Policy Object Editor with appropriate update schedule. Then enable Specify intranet Microsoft update service location properties with appropriate server information.

Answer: A, D

Question:28

You are employed as a network consultant at Cer-tech.com. The Cer-tech.com network consists of a single Active Directory domain named Cer-tech.com. The Cer-tech.com network has one network server named Server01. Server01 is configured to run Microsoft Small Business Server 2003; Standard Edition. You have received instruction from the Manager to implement a backup strategy for Cer-tech.com. A Cer-tech.com employee named Ally Wagner works as the Certech.com technician. You need to issue Ally Wagner with the appropriate instructions so as to ensure that they will be able to restore the information in the event of the natural disaster. What should you do? (Choose all that apply)

- A. Instruct Ally Wagner to perform a daily backup to the tape.
- B. A normal backup should be run daily and copies of backup tapes should be stored in a remote location.
- C. Instruct Ally Wagner to use the Automated System Recovery (ASR) wizard weekly to create an ASR backup.
- D. Instruct Ally Wagner to create a startup disk by using the format a: /s command. Then store the disk at a remote location.

Answer: B, C

Question:29

You work as the network administrator at Cer-tech.com. The Cer-tech.com network consists of a single Active Directory domain named Cer-tech.com. Cer-tech.com consists of 30 employees. The Cer-tech.com has purchased a server that is configured to run Microsoft Windows Small Business Server 2003, Standard Edition which is named Server01. The

company also purchases 10 client workstations that are configured to run Microsoft Windows XP Professional. The staff of Cer-tech.com is assigned to a specific desk. The desks with workstations are shared by all staff members on a rotating basis. However, staff members need to access the documents from any workstation. You have received instruction from the Manager to allow all employees to share completed documents. The staff members want to be sure that changes are not made to unfinished documents by other users. You thus need to configure a method for staff members to access documents from any client workstations as well as a method for document sharing amongst staff members. What should you do?

- A. A drive mapping should be configured in all staff profiles to a shared folder. Staff members need to keep uncompleted documents in the shared folder. Every staff member need to keep their uncompleted work in their own My Document folder.
- B. To accomplish this you need to create roaming profiles for all staff members.
- C. Firstly you need to configure a SharePoint site for company documents. Staff members need to post their completed documents to the site. Then create sub sites with individualized permissions for uncompleted documents.
- D. You need to configure the default domain Group Policy in order to redirect the My Document folder of all staff members to a central location on the server.

Answer: C

Question:30

You are the network administrator for your company. The network contains a server that runs Windows Small Business Server 2003. As a fault tolerance strategy for the operating system volume, you configure the server to use disk mirroring. The operating system volume is mirrored on two disks, disk0 and disk1. Disk1 fails. You need to install a new disk and re-establish fault tolerance for the operating system volume. What should you do? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

- A. Break the existing mirror
- B. Replace disk1
- C. Convert the new disk to a dynamics disk
- D. Create a new mirror
- E. Convert disk1 to a dynamics disk.

Answer: A, B, C, D

Question: 31

You work as the network administrator at Cer-tech.com. The Cer-tech.com network consists of a single Active Directory domain named Cer-tech.com. Your duties at Cer-tech.com include managing Windows Small Business Server 2003. At present the Cer-tech.com network contains a server named Server01 and 35 Windows XP Professional user computers.
